Policy Paper on Youth, Homelessness and Health

While there is a lack of comparable data at EU level and perceptions may differ depending on the country, evidence shows that youth homelessness is a shared reality across Europe, which entails a number of common features and challenges, including from a health and social protection perspective. If national measures aimed at children, adolescents and young people vary considerably, vulnerability to homelessness and ill health seem to be reinforced by a number of risk factors among many young people in transition towards independent life. This paper will mainly focus on similar aspects and situations experienced by young people between 16 and 25.

First of all, it should be said that social exclusion and homelessness are complex and multifaceted realities, which affect all areas of people’s life and have an unquestionable impact on people’s state of health and well being. Homelessness is usually the result of a combination of factors. It is a process rather than a static phenomenon, which affects many vulnerable individuals and households at different points in their lives.

Pathways into youth homelessness may vary, although elements such as: experience of instability and conflict at home, State care history, and negative peer association and problem behaviour (often linked to the afore mentioned difficulties), appear to increase vulnerability to homelessness. For many young people, leaving home may have been a temporary solution to escape an abusive environment, while other may have experienced homelessness as a child. Health related implications of youth homelessness include a range of physical and mental health problems, such as respiratory problems, poor nutrition, substance misuse, injuries or depression. Health professionals can contribute to efforts to improve the health of young homeless people by taking account of their special health needs and working towards meeting these needs. In many cases, young people may cumulate a number of

---

1 The definition of youth homelessness may vary and cover a range of situations depending on the country, including children under 18, young people between 16 and 25, etc. Also, the type of measures and the responsibility for their implementation may fall under the competence of different ministries or departments. See: “Youth homelessness in the European Union”, FEANTSA, 1998; “Child homelessness in Europe – an overview of emerging trends”, FEANTSA, 2007; “Homelessness Research in Europe – Festschrift for Bill Edgar and Joe Doherty”, FEANTSA, 2010.

2 Homelessness is understood in the wider sense as part of a continuum of living situations whereby people are roofless, houseless, insecurely housed or inadequately housed, in accordance with the European Typology of Homelessness and Housing Exclusion (ETHOS). Homelessness and housing exclusion is usually the result of a combination of factors. Factors of vulnerability include housing related problems, unstable employment, family status, ethnic status, relationship breakdown, addictions, etc. Causes may be of structural, institutional, relationship-related or of personal nature.

3 FEANTSA embraces the comprehensive definition of health set out in the preamble of the World Health Organisation’s constitution: “Health is a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity”.

conditions, thus raising the question of whether mainstream services are able to address a variety of issues in a comprehensive and sustainable way.

In this context, FEANTSA would like to raise a number of issues and challenges, which need to be addressed in the framework of appropriate policy responses at European, national and local levels:

- **Breaking the cycle of poverty, social exclusion, homelessness and ill health**

Today, 19 million children are at risk of poverty in the European Union and recent estimates show that inequality and poverty are rising in most OECD countries. Knowing that there are large differences in health status depending on economic status, level of education, place of residence, gender and ethnic group belonging, these findings suggest that health inequalities will continue increasing in the foreseeable future. Moreover, knowing that poverty and social exclusion experienced at an early stage are likely to have long lasting effects on people’s lives, including on health, school attendance, performance and future work prospects, the situation appears to be alarming.

Another problem is that due to the precarious and difficult living situation they are faced with, homeless and severely excluded individuals and families have no choice but to prioritise their needs. As a result, they are not likely to put health in the first place, unless it becomes an acute condition. This has problematic implications at both individual and societal level.

Given the impact of living conditions on people’s health and the close correlation between people’s scarce resources and health behaviour, outcome and use of health services, tackling poverty, social exclusion and health inequalities in a comprehensive way should be considered a policy priority, as well as a sound investment, at all levels.

- **Implementing measures targeted at young people**

In some EU Member States, ending youth homelessness is a national priority and there are policies targeting specific groups of young people, who cumulate multiple disadvantages and are at risk of becoming homeless. Both preventative measures and measures promoting access to rights and services, including accommodation and health care, are needed. Addressing family homelessness, or

7 See OECD’s report “Growing Unequal”, 2008. Web site: [http://www.oecd.org/document/53/0,3343,en_2649_33933_41460917_1_1_1_1,00.html](http://www.oecd.org/document/53/0,3343,en_2649_33933_41460917_1_1_1_1,00.html).

8 See FEANTSA contribution to the consultation on EU action to reduce health inequalities, 2009; see also Karin Heitzman, Austria - Tackling child poverty and promoting the social inclusion of children, peer review social inclusion, 2007. Health inequalities cannot be influenced by health policies alone: there is a need for coordinated and integrated action, which should involve a range of policy areas, including social, economic and environmental. See “Health in all policies”, EC web site: [http://ec.europa.eu/health/ph_overview/other_policies/health_other_policies_en.htm](http://ec.europa.eu/health/ph_overview/other_policies/health_other_policies_en.htm).

better preventing it through early intervention schemes, is also crucial to avoid children entering a cycle of homelessness\(^\text{10}\).

Children living in shelters, for instance after having witnessed gender based violence or parental substance abuse at home, require specific support in order to overcome the traumatic experience they had and avoid related health problems as adults\(^\text{11}\). Similarly, young people fleeing an abusive environment need to be protected from further exposure to abuse and be given an opportunity to address related issues, including mental health problems. Gender sensitive measures should be designed and implemented. Information, support – including psychological counseling – and training tailored to the needs of young people who are homeless should be made available, both for the purpose of them to access relevant services and schemes, and to acquire the necessary skills for reintegration and full participation in society\(^\text{12}\).

- **Ensuring that the transition to independent life does not lead to homelessness**

Most European countries have policy measures specifically aimed at children\(^\text{13}\), which include health related aspects. However, it appears that national welfare systems fail to properly address some of the difficulties faced by young people when in transition into adulthood. In general, ministries and departments responsible for catering for the needs of young people vary depending on whether they are under 18 or older\(^\text{14}\). As a result, lack of coordination may lead to a situation where young people, and in particular young people at risk\(^\text{15}\), are denied access to their rights, the support they need and may become homeless.

In some European cities, the proportion of young people among homeless service users appears to be much higher than the percentage of young people among the general population, while in some countries their number seems to have considerably increased in recent years, as well as the proportion of young foreigners\(^\text{16}\). In addition to the lack of affordable housing and increasing rates of youth unemployment, existing gaps in terms of social protection and health care entitlements for young people constitute an additional element of vulnerability – and a *de facto* discrimination – often preventing them from accessing the services and health care they need\(^\text{17}\).

Also, although in theory homeless people and other vulnerable groups may be legally entitled to basic health care in many European countries, there are a number of uncertainties and hurdles to overcome, which significantly undermine their effective access to health care services and enjoyment of their fundamental rights. While a comprehensive definition of health goes far beyond considerations of access to health care services, access to health care often proves to be a daily challenge for many people faced with homelessness, poverty and social exclusion, and this is even more the case in a period of crisis.

The national legal and policy framework, as well as the way policies are implemented, have a direct impact on the ability of people to address their needs, including health related needs. Therefore, to avoid adding unnecessary reasons for vulnerability, addressing structural and institutional factors is crucial, including ensuring intra-governmental coordination as well as legislation and policy consistency.

• Need for integrated approaches to youth homelessness and health

Action to bridge health inequalities and to address youth homelessness is at the cross roads of different policy areas and levels of competence. In order to be effective, measures need to be integrated in policy areas such as social policies, housing, public health, employment, economic policy, education and training, immigration, asylum or research.

Therefore, involving all relevant actors is of the utmost importance, as well as fostering multidisciplinary partnerships and cross sectoral cooperation. Moreover, appropriate measures are likely to be successful only if appropriate resources and funding are provided for.

18 The right to benefit from access to health care is recognised in human rights texts at international and European level, including: Council Conclusions on the Common Values and Principles in EU Health Systems (2006): “Universality means that no-one is barred access to health care; solidarity is closely linked to the financial arrangement of our national health systems and the need to ensure accessibility to all; equity relates to equal access according to need, regardless of ethnicity, gender, age, social status or ability to pay”; Charter of Fundamental Rights of the European Union, Article 35: “Everyone has the right of access to preventive health care and the right to benefit from medical treatment under the conditions established by national laws and practices. A high level of human health protection shall be ensured in the definition and implementation of all Union policies and activities”; Article 13 of the Council of Europe Revised European Social Charter.

20 The way the health system is organised, the way the right to health is implemented, health care entitlements, etc.

21 In the Czech Republic for instance young people under 26 living at their parents and registered as unemployed are not entitled to social benefits. The idea behind this measure is to encourage them to look for a job, a side effect being that if they do not manage to find a job, some parents may not be able to cover their costs anymore and will ask them to leave, which put them at direct risk of homelessness. See relevant legislations 111/2006 Sb: http://portal.gov.cz/wps/portal/ s.155/701/cmd/ad/c/313/.ce/10821/p/8411/ s.155/701?PC_8411_name=o%20hmotn%C3%A9%20nouzi&PC_8411_l=111/2006&PC_8411_ps=10/10821 and 110/2006 Sb: http://portal.gov.cz/wps/portal/ s.155/701/cmd/ad/c/313/.ce/10821/p/8411?PC_8411_name=o%20%C5%BEivotn%C3%A9%20minimu&PC_8411_l=110/2006&PC_8411_ps=10/10821
FEANTSA is supported by

This programme was established to financially support the implementation of the objectives of the European Union in the employment and social affairs area, as set out in the Social Agenda, and thereby contribute to the achievement of the Lisbon Strategy goals in these fields. The seven-year Programme targets all stakeholders who can help shape the development of appropriate and effective employment and social legislation and policies, across the EU-27, EFTA and EU candidate and pre-candidate countries. To that effect, PROGRESS purports at:

- providing analysis and policy advice on employment, social solidarity and gender equality policy areas;
- monitoring and reporting on the implementation of EU legislation and policies in employment, social solidarity and gender equality policy areas;
- promoting policy transfer, learning and support among Member States on EU objectives and priorities; and
- relaying the views of the stakeholders and society at large.
