

# PIE4shelters

Improving the capacity of homeless services to support women survivors of gender-based violence

## The PIE4shelters Project

Gender-based violence (GBV) is the main cause of homelessness amongst women. Homelessness is a significant risk factor for experiencing GBV.

PIE4shelters improves the protection and support of homeless women as a group particularly affected by GBV by improving the response of homeless services.

PIE4shelters builds the capacity of homeless services to meet the needs of homeless women with experience of GBV through:

- ◆ extensive staff training for frontline & management staff;
- ◆ developing and disseminating the PIE4shelters Training Guideline which will be accessible for free;
- ◆ supporting homeless services and shelters to become Psychologically Informed Environments (PIEs).
